

POLLINATORS:

Maintaining Safe, Productive Habitat to Ensure Plant Reproduction

Chesterville: Free workshop, August 20th, 2019 from 8:30am-11:30pm, Franklin County Soil and Water Conservation District is holding an educational event at the Chesterville Center Union Meeting House at 3 Boroughs Road.

Pollinators are essential to our environment. The ecological service they provide is necessary for the reproduction of over 85% of the world's flowering plants, including more than two-thirds of the world's crop species.

This interactive workshop will help guide participants through the observation, identification, and ecology of pollinators. Wildlife Ecologist Deb Perkins will be sharing with us her expert opinions and experiences that she has gathered over her 25 years of experience in the field. Deb also owns and is the sole proprietor of First Light Wildlife Habitat. She will be touching on topics such as pollinator habitat needs, environmental stressors, and what property owners can do to create more high value habitat for pollinator. She hopes to get more individuals helping to save and increase our pollinators.

Please e mail rosetta.thompson@franklincswcd.org with your name, address, and phone number to register before Aug. 15th or call 778-4279.

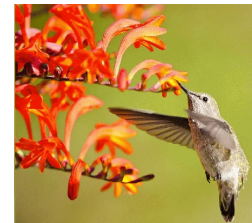

This **free** workshop needs twenty participants signed up to run.
